TECHNOLOGY

SECURITY, SURVEILLANCE, INTELLIGENCE

CCTV Surveillance Systems are one of the most powerful security tools that a business can own, and with the technology available today, this essential tool can protect people, property, and information in any type of location, large or small, from a single office to businesses with multiple sites and operations.

Our knowledge and dedication in the design, installation, service, and maintenance of professional CCTV Surveillance Systems, coupled with a firm goal to exceed our clients' expectations is what sets us apart from our competitors. We are authorised partners of Avigilon, who are one of the world's leading video surveillance technology manufacturers, and part of the Motorola Solutions group.

By having a proactive approach to our clients' requirements, we are able to overcome most site restrictions and offer high-performance, feature-rich CCTV Surveillance Systems at a cost-effective price, whilst considering that the design of a system must be solution-based rather than technology-led.

Safety and Security

**Business Benefits
& Insights**

Peace of Mind

JMK SECURITY ARE AN EXPERIENCED AND RECOGNISED INSTALLER OF A WIDE SPECTRUM OF CCTV SURVEILLANCE SYSTEMS AND APPLICATIONS:

IP CCTV IP (internet protocol) is the current industry standard when it comes to video surveillance. An IP surveillance system in the simplest terms is a digital video camera system that can both send and receive a signal through a computer network. IP cameras provide overall higher video quality than analogue cameras. They are feature rich and offer more video site ranges, such as a wide or narrow field of view, and better zoom-in capabilities. And because they transmit truly digital signals, they offer far greater video detail.

Video Analytics & Optimisation

Video analytics and in video surveillance systems have become more commonplace to improve security and safety processes thanks to the development of artificial intelligence (AI) algorithms, even providing actionable business intelligence for organisations.

Cloud & On-Premises Technology

Cloud-based visual data storage, distribution and management system enabling event driven CCTV images to be saved in the cloud. It enables a modern cloud-connected user experience, accessible from a web browser or the ACC Mobile App. Cloud can be used as a backup to the traditional methods of recording or as a replacement, thus removing the requirement for a Network Video Recorder (NVR) or server and ensuring the data is securely stored away from site.

Automatic Number Plate Recognition (ANPR)

Automatic Number Plate Recognition can be used to assist parking management, vehicle tracking and security applications.

Wireless Transmission

Wireless systems are available to overcome any boundaries and allow rapid deployment CCTV should it be required.

Thermal / Body Temperature Screening

Due to the Covid-19 pandemic, there has been an increased demand for body temperature screening cameras business, education and hospitality & leisure sectors. Can be used for rapid and preliminary temperature screening in office buildings, factories, stations, airports and other public places, with accuracy up to $\pm 0.3^{\circ}\text{C}$.

Security Lighting

If you have particular concerns about security at night, a combination of the right CCTV system and security lighting will go a long way to protecting your property. Lighting can have two important functions: both acting as a strong deterrent and further improving images recorded at night by your CCTV systems. Being experts in both security and electrical services, we can advise on the correct combination of lighting and CCTV cameras for you and your premises.

NSI Gold ARC Monitoring

Remote CCTV monitoring can be installed for temporary or permanent use across a broad range of industries and applications. Whether you need vacant property security to prevent illegal occupation, remote monitoring of a construction site to protect expensive tools and equipment or car park surveillance to aid enforcement or protection – JMK Security will design a solution to meet your security needs.

We carry out security installation work across the following sectors:

- **Commercial**
- **Manufacturing**
- **Retail**
- **Hospitality & Leisure**
- **Education**
- **Agriculture**

We understand that when it comes to protecting your home, you need a CCTV system that you can rely on. A system that fulfils all the basic requirements of capturing live footage and storing it for later. Here at JMK Security, our technology allows CCTV to prevent break-ins and unwanted access, before it even happens, so that CCTV is being used to prevent people entering your home as opposed to just identifying them once it's too late.

- Access cameras remotely from a mobile, tablet, or desktop device with all footage being stored in the cloud.
- Use CCTV as a video tripwire and start recording / sound the alarm if motion is detected in a specific area
- Install cameras inside, outside and surrounding your home for complete visibility, all accessible from a single app.

Plus, with night vision cameras, your cameras are always watching.

CCTV for Site & Rental

Your Complete Site Security Solution

Construction Security

Site crime, including theft, vandalism and arson remains a major challenge for the construction industry with approximately 7,000 break-ins per year costing the UK and Ireland industry up to £900m through plant theft.

All-In-One Security Solution

Our Mobile CCTV Towers are specifically designed to provide all-in-one site security for temporary construction, demolition and infrastructure projects from preliminary site works stage through to occupied and operational spaces. Free standing, rapidly deployable security solution, designed to proactively prevent crime, and provide other project related benefits.

At 7m tall, our Mobile CCTV Towers provide a highly-visible deterrent that help to prevent trespass and intrusions on to sites, support health and safety legislation, and as truly rapid-deployment security solutions they can be installed and fully operational in a fraction of the time of conventional fixed cameras.

As all-in-one security solutions, JMK Mobile CCTV Towers combine wireless transmission of video and alarms (via 4G/3G or Wi-Fi), a high definition 360° infrared PTZ camera to allow a remote Monitoring Centre to capture video images, audio speakers to enable a remote challenge to occur and local recording capability for the storage of evidential footage.

JMK Mobile CCTV Towers proactive site security solution are fully monitored remotely by our private Alarm Receiving Centre (ARC) control room so even when the site is closed there is always someone watching. The JMK remote alarm receiving centre will utilise the audio speakers to provide a live audio challenge to the verified intruders and in escalated scenarios the police or mobile guards will be alerted.

Who needs temporary security?

- Road
- Rail
- Construction
- Demolition
- Vacant Property
- Utilities
- Rural Areas
- Energy Farms
- Events
- Fly-tipping

We provide all the equipment for you on a rental basis. This means that we supply and install all equipment on site for you and take it all down when the project is completed. This means no upfront capital outlay nor any worrying about maintaining your cameras. Just complete peace of mind that your site is secure.

No power? No problem

We have developed a range of solutions that mean that even when there is no permanent power in place, we can still monitor your site. Power options include:

Electricity

Wind

Solar

Battery

Hydrogen

Diesel

Remote Access

Get full 24/7 access to your sites. Our systems feature super-fast 4G connections, access live and recorded footage from mobile devices wherever you happen to be. Pan, tilt and zoom 360° dome cameras with a swipe of the screen.

JMK 
SECURITY

Intruder Alarm Systems

Commercial & Domestic

From a single door contact to a multi-zone system spanning several locations, we will design a system around your requirements and exceed your expectations.

The constant threat of intruders which can lead to criminal damage and/or theft is an ever-increasing risk to organisations throughout the UK.

Our intruder alarm systems are specifically designed and installed to the highest standards to provide protection for both high and low risk organisations including offices, storage units, warehouses, shops, cash rooms and schools.

From a single door contact to a comprehensive multi-zone system, we will design a system around your requirements combining proven techniques with leading edge technology, fully compliant to the latest British and European standards.

By using our remotely monitored intruder alarm systems you will benefit from one of the most advanced and highly developed monitoring centres in the country, complying with all current British and European Standards and Police force policies, giving you a completely dependable and feature-rich intruder alarm system.

FEATURES

- Wired & Wireless Intruder Panels, Devices, Communicators & Sounders
- Superb RF Range for larger premises
- Flexible and adaptable for future changes
- Maintenance programme to suit all budgets
- Alarm User App for full control from any location
- ARC Monitoring

BENEFITS

- Deterrent against vandalism
- Reduction in insurance costs
- By alarming key areas in the business, you can prevent staff theft
- Remotely monitored systems can reduce insurance costs and enhance effectiveness
- Guaranteed response within 4 hours

Intruder Alarm Systems

Commercial & Domestic

Commercial and Larger Properties

HKC's SecureWatch wired or SecureWave hybrid platforms are Grade 2 blind end station and are ideal to protect larger properties. The innovative RF Expander Architecture makes it easy to overcome range issues in larger buildings or sites with multiple buildings.

Residential Properties

A wide range of devices are available to protect the home using a mix of perimeter shock and contact sensors with internal motion sensors. Shock sensors provide an early warning of a potential break-in.

Intruder Device Portfolio

JMK provide both wired and wireless detectors. The range includes:

- ✓ Grade 2 Commercial & Residential Control Panels
- ✓ Installer & Alarm User Apps
- ✓ Proximity Touch Keypads
- ✓ Inertia / shock sensors (standard & miniature)
- ✓ PIR & PIR with Camera
- ✓ Dual Tech
- ✓ IP Communicator Modules
- ✓ Internal & External Sounders
- ✓ Life Safety Devices

Access Control

Secure Authorisation

With the need to limit and control access to sensitive data and specific areas within the workplace, having a correctly designed access control system is a requirement that has become a vital part of today's business world.

Our access control system will allow the safe movement of authorised employees, visitors, contractors and others throughout the workplace. It will help to prevent loss of stock and personal possessions whilst keeping sensitive information safe. It can also be used alongside vehicle barriers to control vehicular traffic to and from a site, whilst allowing the same ID token to be used to grant users access to and from the premises.

With an access control solution designed and installed by JMK Security, you have a tailor-made system using the latest access control technologies ranging from smart card / token applications to feature-rich biometric systems, all of which are scalable, flexible, and easy to use.

Without the right access control hardware, your solution is likely to be compromised. For this reason, as part of your system design, we offer various access control hardware, ranging from locking mechanisms to readers that will suit your premises and resolve your issues. All of our access control solutions are designed specifically to the security needs of your site, be it a school, hospital, offices or a warehouse.

Our Solutions:

Locking Mechanisms

Proximity Card Readers

ID Cards and Fobs

Biometrics

Wireless Door Handles

Door Entry

Central Administration

Remote Access

Electrical Services

Industrial & Commercial

Electrical Services

JMK Omagh Ltd are expert industrial and commercial electrical contractors. We are NICEIC Approved with over 15 years' experience in the electrical installation industry across Ireland and Britain. We're committed to providing a high quality, safe and reliable service to our customers.
